

COLLECT • ANALYZE • INVESTIGATE

OSINT

OPEN SOURCE INTELLIGENCE

THE POWER OF INFORMATION
IS IN OPEN SOURCES!

COLLECT

Find data from
open sources

ANALYZE

Examine and
understand data

CORRELATE

Connect the dots
and find patterns

INVESTIGATE

Get insights and
uncover the truth

POPULAR OSINT TOOLS

-  Google Dorks
-  theHarvester
-  Shodan
-  Maltego
-  WHOIS Lookup
-  SpiderFoot

... and many more!

REMEMBER

- ☒ Verify everything.
- ☒ Use multiple sources.
- ☒ Respect privacy and laws.
- ☒ Think before you act.
- ☒ Ethical OSINT is powerful OSINT!

STAY CURIOUS. KEEP LEARNING. MAKE AN IMPACT.

WHAT IS OSINT?

OSINT stands for **Open Source Intelligence**.

It means collecting useful information from publicly available sources to understand or solve a problem.

SIMPLE EXPLANATION

OSINT is like being a detective. You collect information that is already public on the internet and use it to find answers.

EXAMPLES OF OSINT

Websites

Social Media

News Articles

Maps

Public Records

KEY POINTS

- OSINT uses only public information.
- It does not involve hacking or breaking any rules.
- It helps in making better and faster decisions.
- Anyone with internet access can do OSINT.

WHY IS OSINT IMPORTANT IN CYBERSECURITY?

OSINT helps security teams **see the big picture**.

It gives useful information before attackers can harm the organization.

KEY REASONS

1

FIND THREATS

Helps find possible threats, weak points and risks early.

2

UNDERSTAND ATTACKERS

Learn about attackers, their tools, methods and targets.

3

SUPPORT INCIDENT RESPONSE

Gives extra clues and details that help in investigations.

4

IMPROVE DEFENSE

Helps build better security rules, blocking and protection.

5

SAVE TIME & MONEY

Find information quickly and avoid attacks before they cause damage.

IN SHORT:

OSINT turns public information into powerful insights that keep systems, data and people **safe**.

WHAT ARE COMMON SOURCES OF OSINT?

OSINT information comes from many public places on the internet and in the real world.

1 WEBSITES

Company websites, blogs, about us pages, product pages, careers pages.

2 SOCIAL MEDIA

Posts, photos, videos, comments, user profiles, groups and pages.

3 NEWS & MEDIA

News websites, articles, press releases and online magazines.

4 PUBLIC RECORDS

Government records, business registrations, court records, licenses and permits.

5 DOMAIN & IP INFO

WHOIS data, DNS records, IP address details, domain history.

6 MAPS & LOCATION

Google Maps, street view, business locations, satellite images.

7 ONLINE FORUMS & COMMUNITIES

Q&A sites, tech forums, discussion boards and community groups.

8 FILES & DOCUMENTS

PDFs, reports, research papers, presentations and spreadsheets.

9 PASTES & CODE REPOSITORIES

Paste sites, GitHub, code repositories and leaked data.

REMEMBER:

Most information is already public. You just need to find it, collect it and use it in the right way!

Look around, information is everywhere!

HOW AI HELPS IN OSINT?

AI (Artificial Intelligence) makes OSINT faster, easier and smarter. It helps find, analyze and understand information in a better way.

WAYS AI HELPS IN OSINT

1 FIND INFORMATION FASTER

AI scans huge amounts of data quickly and finds useful information in seconds.

2 ANALYZE LARGE DATA

AI can read and analyze thousands of documents, posts, images and links very fast.

3 FIND PATTERNS & CONNECTIONS

AI finds patterns, links and hidden connections that humans might miss.

4 AUTOMATE REPEITIVE TASKS

AI can do boring and time-consuming tasks like sorting, filtering and organizing data.

5 IMPROVE ACCURACY

AI reduces human errors and gives more accurate and reliable results.

6 PREDICT POSSIBLE THREATS

AI looks at past data and helps predict future threats and risky activities.

7 WORK 24/7 WITHOUT TIREDNESS

AI tools can work all the time without getting tired, so monitoring never stops.

8 SUMMARIZE & EXPLAIN

AI can summarize long articles, reports and conversations in simple words.

IN SHORT:

AI is like a smart helper in OSINT. It saves time, improves results and helps security teams make better decisions.

1. VIRUSTOTAL

VirusTotal is a **free online tool** that checks files, URLs, domains and IPs for viruses, malware and other threats.

WHAT IT DOES

- ✓ Scans files and links using 70+ antivirus engines.
- ✓ Checks URLs and websites for malicious content.
- ✓ Checks IP addresses and domains for bad behaviour.
- ✓ Shows community comments and threat details.
- ✓ Helps you quickly decide if something is safe or dangerous.

HOW TO USE

-  Go to [virustotal.com](https://www.virustotal.com)
-  Upload a file or paste a URL, domain or IP.
-  Click "Search" to start the scan.
-  View the results and threat details.

EXAMPLE USE CASES

-  Check if a downloaded file is safe.
-  See if a suspicious link leads to a harmful site.
-  Check if an IP address is involved in attacks.
-  Research a domain before visiting or trusting.

TIPS

- ★ Always double-check the results. No tool is 100% perfect.
- ★ Look at multiple detections and community comments.
- ★ Use it as the first step in your investigation.
- ★ If you are not sure, don't open the file or link!

REMEMBER: VirusTotal does not remove threats. It only helps you **detect** and **understand** them.

2. ABUSEIPDB

AbuseIPDB is a **free tool** that shows information about IP addresses. It helps identify if an IP was used for malicious or bad activities.

WHAT IT DOES

- ✓ Shows if an IP address is reported for bad activities.
- ✓ Provides reports from users and security experts.
- ✓ Shows details like abuse type, country and usage.
- ✓ Helps in threat hunting and incident response.
- ✓ Gives API access for automation and integration.

HOW TO USE

-  Go to abuseipdb.com
-  Enter an IP address in the search box.
-  Click "Search" to find information.
-  View the report and abuse details.

EXAMPLE USE CASES

-  Check if an IP is linked to hacking, spamming or other attacks.
-  Identify suspicious IPs in email headers or logs.
-  Investigate IPs involved in brute force or login attacks.
-  Block or monitor bad IPs in your firewall.

TIPS

- ★ More reports = more reliable information.
- ★ Check the "Confidence Score". Higher is better.
- ★ Read user comments for more real-world details.
- ★ Use it with other tools for better results.

REMEMBER: AbuseIPDB uses community reports. Always **verify** and use the information with **other sources**.

3. URLSCAN.IO

URLScan.io is a **free tool** that scans URLs and shows what a website does behind the scenes.

It takes **screenshots**, checks files, and shows detailed results.

WHAT IT DOES

- ✓ Takes screenshots of the website.
- ✓ Checks for malicious activity and suspicious behavior.
- ✓ Detects redirects, downloads and scripts.
- ✓ Shows helpful details like IP, ASN, server and technologies.
- ✓ Provides a timeline of everything the website does.
- ✓ Helps in malware analysis and threat hunting.
- ✓ Easy to share and save scan reports.

HOW TO USE

-  Go to urlscan.io
-  Enter the URL in the search box.
-  Click "Search" to start the scan.
-  View the detailed report and results.

EXAMPLE USE CASES

Check if a suspicious link is safe before opening it.

See if a website downloads any files automatically.

Analyze scripts and behavior on the website.

Investigate phishing or fake login pages.

TIPS

- ★ Wait for the scan to complete for full results.
- ★ Check the screenshots and timeline carefully.
- ★ Look at the "Security Verdict" at the top.
- ★ Use it with other tools for better analysis.

REMEMBER: URLScan.io shows how a website behaves. It helps you see **hidden activity** that browsers don't show!

4. ALIENVAULT OTX

AlienVault OTX (Open Threat Exchange)

is a free tool that shares threat information like IPs, domains, file hashes and malware. It helps security teams work together and stay safe.

WHAT IT DOES

- ✓ Shares threat data with the community.
- ✓ Provides information about IPs, domains, malware and file hashes.
- ✓ Shows pulse (trending) threats and recent attacks.
- ✓ Helps in threat hunting and incident response.
- ✓ Allows automation using APIs.
- ✓ Free to use for everyone.

HOW TO USE

EXAMPLE USE CASES

-  Check if an IP is related to malware or attacks.
-  Look up a domain's reputation before visiting.
-  Find details about malware and file hashes.
-  Follow "Pulses" to see latest security threats.

TIPS

- ★ Check the "Pulses" for latest threats.
- ★ Use filters to get better and faster results.
- ★ Combine OTX data with other tools for strong findings.
- ★ Share threat data with your team and help the community.

REMEMBER: OTX is a community-powered platform. The more we share, the safer we all are!

5. SHODAN

Shodan is a search engine for **connected devices** on the internet. It helps find devices, open ports, services and other technical details.

WHAT IT DOES

- ✓ Finds devices like cameras, routers, servers and more.
- ✓ Shows open ports and running services.
- ✓ Provides details about the device, location and organization.
- ✓ Helps in threat hunting and attack surface discovery.
- ✓ Useful for finding exposed or unsecured devices.

HOW TO USE

EXAMPLE USE CASES

- Find exposed security cameras.
- Discover routers with open management ports.
- Find servers and check their running services.
- See where devices are located around the world.

TIPS

- ★ Use specific keywords for better results.
- ★ Filter by country, port, organization and more.
- ★ Check only devices you have permission to test.
- ★ Shodan is for research and defensive security.

REMEMBER: Shodan shows what is exposed on the internet. Always use this knowledge to **protect** and **secure** systems!

6. TALOS INTELLIGENCE

Talos Intelligence is a platform by Cisco that provides **threat intelligence**. It helps find information about domains, IPs, emails and threats.

WHAT IT DOES

- ✓ Provides threat intelligence about domains, IPs, emails and files.
- ✓ Shows reputation scores and threat details.
- ✓ Gives insights from Cisco Talos research team.
- ✓ Helps in threat hunting and incident response.
- ✓ Offers APIs for automation and integration.

HOW TO USE

-  Go to talosintelligence.com
-  Enter a domain, IP, email or file hash.
-  Click "Search" to get results.
-  View reputation score, details and reports.

EXAMPLE USE CASES

Check if a domain is malicious before visiting.

Verify if an email or sender is dangerous.

Investigate IPs involved in attacks.

Analyze file hashes for known threats.

TIPS

- ★ Check the reputation score. Lower score = higher risk.
- ★ Read the full report for more details.
- ★ Use with other OSINT tools for best results.
- ★ Use APIs to automate lookups and save time.

REMEMBER: Talos Intelligence gives trusted threat data from Cisco Talos research team. Use it smartly and **stay safe!**

7. CYBERCHEF

CyberChef is a **free online tool** used for **encoding, decoding, encryption and data analysis**. It helps clean, decode and convert data in many ways.

Input	Output	Operations
48656c6c6f 576f726c64	Hello World!	From Hex To Base64 URL Decode Encrypt And more...

WHAT IT DOES

- ✓ Decodes and encodes data in many formats.
- ✓ Encrypts and decrypts text.
- ✓ Converts data (Base64, Hex, Binary, etc.).
- ✓ Performs hashing and checksums.

- ✓ Helps in data analysis and forensics.
- ✓ Works completely in your browser - nothing is uploaded.
- ✓ Free and easy to use for everyone.

HOW TO USE

EXAMPLE USE CASES

- Decode Base64 encoded strings.
- Convert Hex to text.
- Encrypt or decrypt messages.
- Analyze and clean suspicious data.
- Generate hashes and checksums.

TIPS

- ★ Use "From Hex" to decode hex data.
- ★ Use "To Base64" to encode data.
- ★ Try different operations to understand the data.
- ★ All processing is done on your device - your data stays private.
- ★ CyberChef is great for beginner and expert analysts.

REMEMBER: CyberChef helps you transform and understand data. It is a powerful tool for **OSINT** and **cybersecurity**!

8. THE HARVESTER

theHarvester is an **open source** tool used to gather information about domains, emails, subdomains, hosts and more from **public sources**.

WHAT IT DOES

- ✓ Collects emails, subdomains, hosts and IPs.
- ✓ Grabs data from many search engines and public sources.
- ✓ Helps in OSINT and reconnaissance.
- ✓ Supports search for domains, companies and people.
- ✓ Saves time by collecting data automatically.
- ✓ Free and open source.

HOW TO USE

- Install **theHarvester** on your computer.
- Run the tool with a command and target domain or email.
- theHarvester searches many public sources for data.
- View the results in the terminal or save in a file.

EXAMPLE USE CASES

- Find subdomains of a website.
- Find email addresses linked to a domain.
- Discover hosts and IP addresses.
- Find employee names from public sources.
- Collect information about a company for OSINT.

TIPS

- ★ Always get permission before testing.
- ★ Use for legal and educational purposes only.
- ★ Combine results with other OSINT tools for better data.
- ★ Different sources give different results. Be patient.
- ★ Keep your findings safe and organized.

REMEMBER: theHarvester collects data from public sources only. Use it **ethically**, stay **legal** and respect **privacy**!

9. GOOGLE DORKS

Google Dorks are special search commands used in Google to find **hidden or specific information**. They help find files, login pages, emails, and much more.

site:example.com filetype:pdf

WHAT IT DOES

- ✓ Finds hidden pages and files.
- ✓ Finds login pages and admin panels.
- ✓ Search specific file types (PDF, DOC, XLS, etc.).
- ✓ Finds emails, phone numbers and more.
- ✓ Useful for OSINT and reconnaissance.
- ✓ Saves time by using smart search queries.
- ✓ Free and easy to use.

HOW TO USE

EXAMPLE USE CASES

-  Find PDF files:
`filetype:pdf site:example.com`
-  Find Word documents:
`filetype:doc site:example.com`
-  Find login pages:
`inurl:login site:example.com`
-  Find email addresses:
`intext:@example.com`
-  Find admin pages:
`inurl:admin site:example.com`

TIPS

- ★ Use quotes " " to search exact words.
- ★ Combine dorks for better results.
- ★ Use site: to search in a specific website.
- ★ Use filetype: to find specific files.
- ★ Always use dorks for legal and ethical purposes.
- ★ Too many dorks at once may give confusing results.

REMEMBER: Google Dorks are powerful.
Use them **smartly**, **ethically** and **responsibly**!

10. WHOIS LOOKUP

WHOIS is a query and response protocol used to find information about **domain names**, **IP addresses** and **organizations**. It shows who owns a domain, when it was registered, and contact details.

example.com

Domain Name: example.com
Registrar: Example Registrar
Registrant: John Doe
Created: 2021-01-15
Expires: 2026-01-15
Name Servers:
ns1.example.com
ns2.example.com

WHAT IT DOES

- ✓ Shows domain registration details.
- ✓ Reveals registrant, registrar and registration dates.
- ✓ Shows name servers and contact information.

- ✓ Helps in OSINT, investigation and threat intelligence.
- ✓ Useful for finding related domains and infrastructure.
- ✓ Available for domains and IPs.

HOW TO USE

EXAMPLE USE CASES

- Find out who owns a domain.
- Check when a domain was created or will expire.
- Discover name servers and hosting details.
- Get registrant contact information.
- Investigate domain for OSINT and threat hunting.

TIPS

- ★ Some WHOIS data may be hidden using privacy protection.
- ★ Try different WHOIS servers if no data is returned.
- ★ For IP addresses, it shows network owner and allocation details.
- ★ Use tools like whois.net or [rdap](https://rdap.org/) for more results.
- ★ Respect privacy and use data responsibly.

REMEMBER: WHOIS gives public registration information. Always use it **ethically** and respect **privacy**!

11. SHODAN

Shodan is a search engine that scans the **Internet** to find **devices**, **servers** and **services** that are connected online.

ssl:"Apache" country:"IN" port:80

WHAT IT DOES

- ✓ Finds devices and systems connected to the Internet.
- ✓ Shows detailed information about services and banners.
- ✓ Helps in security research and vulnerability assessment.
- ✓ Finds open ports and exposed services.
- ✓ Useful for OSINT and attack surface mapping.
- ✓ Has a free and paid version.

HOW TO USE

EXAMPLE USE CASES

Find exposed webcams and IP cameras.

Locate servers with open ports and vulnerable services.

Discover network devices and IoT devices.

Map the attack surface of a target organization.

TIPS

- ★ Use filters like country, port, org, os, city, etc.
- ★ Combine keywords for better results. Example: nginx country:"US" port:443
- ★ Check banners and services for insights.
- ★ Use responsibly and only on systems you are authorized to test.
- ★ The Internet is huge - refine your queries for accurate results.

REMEMBER: Shodan shows what is exposed to the world. Use it for **learning**, **research** and improving **security**!

12. MALTEGO

Maltego is an OSINT and data mining tool used to **collect**, **analyze** and **visualize** information from many sources. It helps you discover relationships between entities.

WHAT IT DOES

- ✓ Collects data from many public sources.
- ✓ Shows relationships between people, domains, IPs and more.
- ✓ Visualizes data in easy to understand graphs.
- ✓ Supports many transforms and data sources.
- ✓ Great for OSINT, investigations and threat intelligence.
- ✓ Free Community Edition available (with limited transforms).

HOW TO USE

- Open Maltego and create a new project.
- Drag an entity (e.g., domain, email, person) to the graph.
- Right-click the entity and run a transform to get data.
- View results and relationships in the graph.
- Export or save your results for further analysis.

EXAMPLE USE CASES

- Find related domains and subdomains.
- Discover emails and social media linked to a person.
- Investigate IP addresses and connected infrastructure.
- Gather information about companies and their assets.
- Map relationships between entities for investigations.

TIPS

- ★ Start with good quality data for better results.
- ★ Try different transforms to discover more.
- ★ Use "To New Graph" to explore results deeply.
- ★ Clean and organize your graph for clarity.
- ★ Some transforms need API keys (e.g., Shodan, HaveIBeenPwned).
- ★ Keep notes and export your findings.

REMEMBER: Maltego turns scattered data into meaningful intelligence. Use it **ethically**, respect **privacy** and follow the **law**!

REAL SOC ANALYST INVESTIGATION

USING OSINT TOOLS

SCENARIO:

Our organization received a suspicious email.
The SOC analyst uses OSINT to investigate the sender, domain, IP and related threats.

SUSPICIOUS EMAIL SAMPLE

From: Support Team <support@fastcloud-secure.com>
Subject: Urgent: Verify Your Account
Link: <http://secure-fastcloud.com/login>

INVESTIGATION WORKFLOW

1 WHOIS LOOKUP

Tool: **whois**

Query: **whois fastcloud-secure.com**

Domain Name: fastcloud-secure.com
Registrar: NameCheap, Inc.
Created On: 2024-05-10
Expires On: 2025-05-10
Registrant: Privacy service provided
Name Servers:
dns1.namecheap.com
dns2.namecheap.com

Finding:

- Domain is very new (created 10 days ago)
- Uses privacy protection
- Possible red flag

2 DNS LOOKUP

Tool: **dnsdumpster.com**

Query: **fastcloud-secure.com**

Type	Value
A	185.199.108.153
MX	mail.fastcloud-secure.com
NS	dns1.namecheap.com
NS	dns2.namecheap.com
TXT	v=spf1 include:_spf.google.com -all

Finding:

- IP address found: **185.199.108.153**
- Hosted on CDN (possible hiding)
- Email uses external service

3 IP LOOKUP

Tool: **ipinfo.io**

Query: **185.199.108.153**

IP: 185.199.108.153
Country: United States
Region: California
City: Los Angeles
Org: GitHub, Inc.
ASN: AS54113 Fastly, Inc.
Hosting: CDN / Proxy

Finding:

- IP is from CDN provider (Fastly)
- Real origin is hidden
- Could be used to mask attacker

4 GOOGLE DORKS

Tool: **Google Dorks**

Query: **site:fastcloud-secure.com filetype:pdf**

Google

- fastcloud-secure.com/docs/price-list.pdf
Price List - FastCloud Secure
... Internal document with contact
email: admin@fastcloud-secure.com ...

Finding:

- Found exposed PDF file
- Discovered internal email:
admin@fastcloud-secure.com

5 SHODAN SEARCH

Tool: **Shodan**

Query: **185.199.108.153**

185.199.108.153
HTTP/1.1 200 OK
Server: GitHub.com
X-Served-By: cache-xyz123
Content-Type: text/html
... (CDN / Reverse Proxy)

Finding:

- Confirms IP is behind CDN
- No direct services exposed
- Nothing suspicious on this IP

6 MALTEGO ANALYSIS

Tool: **Maltego**

Input: **fastcloud-secure.com**

Finding:

- Linked email, IP, registrar and assets
- Found LinkedIn page: "FastCloud Secure"
- Very few followers, recently created

INVESTIGATION OUTCOME

Domain is newly registered and uses privacy protection.

Hosted behind CDN to hide real infrastructure.

Exposed internal documents and email addresses.

LinkedIn page is fake and recently created.

Conclusion: This is a high-risk phishing attempt.

LESSONS LEARNED

- Use multiple OSINT tools for better results.
- Correlate information from different sources.
- Look for inconsistencies and red flags.
- OSINT helps in early detection and threat intelligence.

Remember: OSINT is powerful when used **ethically** and **responsibly** for security and safety.

OSINT TOOLKIT

FINAL SUMMARY

OSINT (Open Source Intelligence) is the process of collecting and analyzing information from publicly available sources to gain actionable insights.

TOOLS AT A GLANCE

TOOL	WHAT IT DOES	BEST FOR	EXAMPLE USE
 WHOIS	Finds domain registration and ownership details.	Domain information, owner, dates, name servers	<code>whois example.com</code> Find domain owner and registration info.
 SHODAN	Search engine for devices, servers and services connected to the Internet.	Finding open ports, exposed services, attack surface mapping	<code>apache country:"IN" port:80</code> Find servers running Apache in India on port 80.
 MALTEGO	Collects, analyzes and visualizes data and relationships.	Link analysis, entity relationships, investigations	Import data and visualize connections between entities.
 theHarvester	Gathers emails, subdomains, hosts and employee names from public sources.	Email discovery, subdomain enumeration, employee info	<code>theharvester -d example.com -b all</code> Find emails, hosts and more.
 GOOGLE DORKS	Use advanced search queries to find hidden or sensitive information.	Finding exposed files, login pages, sensitive data	<code>site:example.com filetype:pdf</code> Find PDF files on a website.
 OTHERS	Other tools like SpiderFoot, Censys, Hunter.io, PDFID, etc.	Network analysis, email checks, metadata, and more	Use the right tool based on your investigation goal.

TYPICAL OSINT WORKFLOW

★ Always start with passive collection and respect legal boundaries.

BEST PRACTICES

- ✓ Always verify information from multiple sources.
- ✓ Use multiple tools for better and accurate results.
- ✓ Be patient and methodical in your investigation.
- ✓ Keep accurate notes and documentation.
- ✓ Respect privacy and follow legal guidelines.
- ✓ Use OSINT ethically and responsibly.

TIPS FOR BEGINNERS

- ★ Start with simple tools and basic searches.
- ★ Learn one tool at a time and practice.
- ★ Understand what each tool does and how it helps.
- ★ Join OSINT communities and keep learning.
- ★ Practice on legal targets and public data only.

REMEMBER

- ★ Information is power when used ethically.
- ★ Not everything online is accurate.
- ★ Think before you share or act.
- ★ Your goal is to protect, not to harm.
- ★ OSINT is about knowledge, not intrusion.

BE ETHICAL
BE LEGAL
BE RESPONSIBLE

OSINT is a skill that grows with practice, curiosity and responsibility.
Keep Learning. Keep Exploring. Keep Making a Positive Impact!

FINAL WORDS - YOU ARE NOW ONE STEP AHEAD!

★ Congratulations! You have completed your notes on **OSINT (Open Source Intelligence)**. ★

OSINT turns open information into powerful insights.
Keep learning, keep exploring,
and soon you will be the analyst others look up to!

WHAT YOU LEARNED

- ✓ What is OSINT & how it works
- ✓ Types of OSINT sources
- ✓ People & email investigation
- ✓ Domain & website analysis
- ✓ Social media reconnaissance
- ✓ Device, network & port discovery
- ✓ Data visualization & relationship mapping
- ✓ OSINT tools & their uses
- ✓ Real-world investigation workflow
- ✓ Best practices & ethical guidelines

WHY THIS SKILL MATTERS

- ★ OSINT helps uncover the truth using publicly available information.
- ★ It is widely used in cybersecurity, fraud investigations, threat intelligence, journalism, hiring & more.
- ★ It strengthens curiosity, critical thinking and problem solving.
- ★ It helps protect people, organizations and society.

YOUR NEXT STEPS

- ① **PRACTICE DAILY** → Use OSINT tools and apply what you learn.
- ② **USE LABS** → Try hands-on labs and real-world scenarios.
- ③ **STAY UPDATED** → Follow OSINT communities and threat trends.
- ④ **BUILD PORTFOLIO** → Document your findings and projects.
- ⑤ **BECOME JOB-READY** → Keep improving and stay consistent!

GOLDEN RULES (ALWAYS REMEMBER)

- ✓ Verify information from multiple sources.
- ✓ Think before you trust.
- ✓ Respect privacy and follow the law.
- ✓ Report to protect, not to harm.
- ✓ Stay alert, stay safe.
- ✓ Knowledge + Ethics = True Analyst!

MINDSET OF A GREAT ANALYST

- ★ Be Curious
- ★ Be Detail Oriented
- ★ Be Patient
- ★ Be Logical
- ★ Be Ethical
- ★ Be Passionate

CONTINUE YOUR JOURNEY WITH **BLUETEAMERS.IO**

- ✓ Hands-on OSINT Training
- ✓ Real-World Case Studies
- ✓ Practice Labs & Simulations
- ✓ Beginner to Advanced Path
- ✓ Career Guidance & Mentorship
- ✓ Active Community Support

Blueteamers.io is built to help you become a skilled, ethical and confident **OSINT Analyst!**

VISIT WEBSITE: <https://www.blueteamers.io>

"Information is everywhere,
but intelligence is in how you use it."
Keep Learning. Keep Exploring. Keep Making an **Impact!** 😊

Thank You for completing these notes! You are Awesome!
